Senior Applied AI Engineer | AI Systems Architect

Applied AI Engineer specializing in the design, deployment, and operation of data-centric, production AI systems. Combines strong foundations in machine learning with deep experience in cloud infrastructure, Kubernetes, and observability to deliver reliable, cost-aware AI solutions that operate at scale. Experienced across the full AI lifecycle—from problem formulation and dataset design to model adaptation and long-running inference systems.

CORE EXPERTISE

- AI Systems Design & Production Deployment
- Data-Centric AI (Synthetic Data, Error-Driven Datasets)
- Multimodal AI (OCR, Vision-Language)
- Model Adaptation (LoRA, RAG, Hybrid Architectures)
- Kubernetes-based AI Inference Systems
- Observability & Drift Detection
- Cost-Aware AI Deployment
- Cloud-Native AI Platforms (AWS, Terraform)

PROFESSIONAL EXPERIENCE

Machine Learning Engineer
July 2024 – Present

YouGov (formerly GfK), Nuremberg

AI Systems & Multimodal Intelligence

- Led development of a Receipt Intelligence Platform delivering a multimodal pipeline combining OCR, vision-language models, and LLMs to extract structured FMCG data across diverse international receipt formats.
- Designed data-centric evaluation workflows, including synthetic dataset generation and error-driven retraining loops to improve robustness against real-world noise and layout variability.
- Architected scalable serverless inference pipelines using AWS Bedrock, Lambda, SQS, MongoDB, and Terraform to enable automated processing with minimal operational overhead.
- Implemented ML observability frameworks leveraging ELK to monitor model behavior, latency, and failure patterns across production deployments.
- Contributed to internal MLOps strategy integrating SageMaker Pipelines and GitLab CI/CD for controlled model release and lifecycle management.

Machine Learning Consultant
April 2022 – May 2024

Machine Learning Reply GmbH, Munich

- Delivered applied AI and data platform solutions for enterprise clients including Allianz, Volkswagen, and Porsche.
- Built containerized RAG-based knowledge systems on Azure using OpenAI embeddings and FastAPI, enabling privacy-preserving legal document analysis workflows.
- Designed and operated Kubernetes-based data and ML platforms using Argo Workflows, Prometheus, and Grafana, reducing incident detection time by ~50%.
- Migrated ~1 PB of legacy data infrastructure from Cloudera to AWS, redesigning pipelines using Spark on EMR and modern CI/CD deployment patterns.
- Developed secure data ingestion pipelines integrating on-prem APIs with Azure Synapse for enterprise analytics use cases.

Data Scientist (Research Engineer)
May 2021 – March 2022

Fraunhofer IKS, Munich

- Researched hybrid anomaly detection systems combining deep learning and rule-based reasoning for safety-critical environments.
- Applied contrastive learning (MoCo) to improve model robustness under sparse anomaly scenarios.
- Collaborated with domain experts to transition research prototypes into production-viable system designs.

TECHNICAL SKILLS

EDUCATION

M.Sc. Data Analytics 2021 (Grade 1.6)
Universität Hildesheim

B.Sc. Electrical & Electronic Engineering First Class Honours
University of Ibadan

CERTIFICATIONS

- AWS Machine Learning Specialty
- AWS Solutions Architect Associate
- Terraform Associate
- Azure Fundamentals

TEACHING & COMMUNITY

Data Analytics Instructor — ReDI School of Digital Integration *2023–2025*

AWS Community Builder *2021–2025*

NLP Tutor — DeepLearning.AI *2021*

PROFESSIONAL FOCUS

Designing AI systems that:

- Solve practical business problems through structured problem formulation
- Leverage curated, high-signal datasets rather than brute-force model scaling
- Adapt foundation models efficiently using LoRA, retrieval, and hybrid strategies
- Operate reliably in production with observability, cost control, and lifecycle governance
