SENIOR APPLIED AI ENGINEER | AI SYSTEMS ARCHITECT

Applied AI Engineer focused on designing, deploying, and operating long-running, data-centric AI systems. Combines strong machine learning foundations with cloud-native infrastructure and observability practices to deliver reliable, cost-aware AI solutions. Brings an interdisciplinary background spanning oil & gas field operations, technology consulting, and applied AI—providing a practical understanding of how real-world data is generated, processed, and operationalized at scale.

CORE EXPERTISE

- AI Systems Design & Production Deployment
- Multimodal AI (Document, OCR, Vision-Language)
- Model Adaptation (LoRA, RAG, Hybrid Architectures)
- Observability, Drift Detection & Model Lifecycle Management
- Cloud-Native AI Platforms (AWS, Terraform)

PROFESSIONAL EXPERIENCE

Machine Learning Engineer
YouGov (formerly GfK), Nuremberg — *July 2024 - Present*

Applied AI Systems & Multimodal Intelligence

- Owned design-to-deployment lifecycle of production AI receipt-processing workflows.
- Led development of a Receipt Intelligence Platform combining OCR, vision-language models, and LLMs to extract structured FMCG data across diverse international receipt formats.
- Designed data-centric evaluation pipelines including synthetic dataset generation and error-driven feedback loops to improve robustness against noisy real-world inputs.
- Architected scalable inference systems using AWS Bedrock, Lambda, SQS, MongoDB, and Terraform for automated, high-volume retail data ingestion.
- Implemented observability frameworks to track model behavior, latency, and operational regressions.
- Supported controlled model lifecycle management using SageMaker Pipelines and GitLab CI/CD.

Machine Learning Consultant
Machine Learning Reply GmbH, Munich — *April 2022 - May 2024*

- Delivered applied AI and data platform solutions for enterprise clients including Allianz, Volkswagen, and Porsche.
- Built containerized RAG-based systems on Azure enabling privacy-preserving document intelligence workflows.
- Established repeatable deployment patterns for ML and data workloads on Kubernetes with integrated observability.
- Migrated ~1 PB of legacy infrastructure from Cloudera to AWS, redesigning pipelines using Spark on EMR with modern CI/CD practices.
- Designed secure ingestion pipelines integrating on-prem APIs with Azure Synapse.

Data Scientist (Research Engineer) *May 2021 - March 2022*
Fraunhofer IKS, Munich

- Researched hybrid anomaly detection systems combining deep learning and rule-based reasoning for safety-critical use cases.
- Applied contrastive learning (MoCo) to improve robustness in sparse anomaly detection scenarios.
- Collaborated with domain experts to transition research prototypes into production-viable system designs.

Field Engineer *Dec 2015 - Apr 2018*
SLB (Oil & Gas Engineering & Consulting), Land and Offshore

- Led end-to-end well intervention operations (matrix acidizing, nitrogen lift, fishing) on land and offshore rigs for major clients including Total, Shell, and ExxonMobil, applying strong engineering knowledge and best-in-class QHSE practices.
- Installed field instrumentation and performed real-time data analysis to guide dynamic operational decisions—building foundational expertise in handling noisy, real-world data streams.
- Managed client relations, logistics, financials, and change controls, ensuring seamless execution, cost-effectiveness, and high customer satisfaction across all job phases.
- Prepared technical sales pitches, end-of-job reports, and presentations, translating operational data into insights that supported business development and continuous improvement.

TECHNICAL SKILLS

AI & Machine Learning: Python, PyTorch, Hugging Face Ecosystem, LoRA / PEFT, Retrieval-Augmented Generation, Multimodal Processing

AI Systems & Infrastructure: Kubernetes, Docker, Terraform, GitLab CI/CD, Model Serving Architectures

Cloud Platforms: AWS (Bedrock, SageMaker, Lambda, SQS, EMR), Azure (Synapse, OpenAI)

Observability & Operations: Prometheus, Grafana, ELK Stack, Production Monitoring, Drift Detection

Data Engineering: PySpark, SQL, Data Pipeline Architecture

Systems Languages: Rust (systems-level experimentation), Go (Kubernetes ecosystem literacy)

EDUCATION

M.Sc. Data Analytics *2021*
Universität Hildesheim *Grade 1.6*

B.Sc. Electrical & Electronic Engineering
University of Ibadan *First Class Honours*

CERTIFICATIONS

- AWS Machine Learning Specialty
- AWS Solutions Architect Associate
- Terraform Associate
- Azure Fundamentals

TEACHING & COMMUNITY

Data Analytics Instructor *2023–2025*
ReDI School of Digital Integration

AWS Community Builder *2021–2025*
AWS Community Builder

NLP Tutor *2021*
DeepLearning.AI
