Temiloluwa Adeoti

SENIOR APPLIED AI ENGINEER | AI SYSTEMS ARCHITECT

Location	Munich, Germany	**Telephone**	+49 159 0683 7701
Email	temilolu74@gmail.com	**Website**	temiloluwa.github.io
LinkedIn	temiadeoti	**Github**	Temiloluwa

Profile

Applied AI Engineer specializing in the design, deployment, and operation of data-centric, production AI systems. Combines strong foundations in machine learning with deep experience in cloud infrastructure, Kubernetes, and observability to deliver reliable, cost-aware AI solutions that operate at scale. Experienced across the full AI lifecycle—from problem formulation and dataset design to model adaptation and long-running inference systems.

Professional Experience

Machine Learning Engineer
YouGov (formerly GfK), Nuremberg

July 2024 - Present

- Led development of a Receipt Intelligence Platform delivering a multimodal pipeline combining OCR, vision-language models, and LLMs to extract structured FMCG data across diverse international receipt formats.
- Designed data-centric evaluation workflows, including synthetic dataset generation and error-driven retraining loops to improve robustness against real-world noise and layout variability.
- Architected scalable serverless inference pipelines using AWS Bedrock, Lambda, SQS, MongoDB, and Terraform to enable automated processing with minimal operational overhead.
- Implemented ML observability frameworks leveraging ELK to monitor model behavior, latency, and failure patterns across production deployments.
- Contributed to internal MLOps strategy integrating SageMaker Pipelines and GitLab CI/CD for controlled model release and lifecycle management.

Machine Learning Consultant
Machine Learning Reply GmbH, Munich

April 2022 - May 2024

- Delivered applied AI and data platform solutions for enterprise clients including Allianz, Volkswagen, and Porsche.
- Built containerized RAG-based knowledge systems on Azure using OpenAI embeddings and FastAPI, enabling privacy-preserving legal document analysis workflows.
- Designed and operated Kubernetes-based data and ML platforms using Argo Workflows, Prometheus, and Grafana, reducing incident detection time by ~50%.
- Migrated ~1 PB of legacy data infrastructure from Cloudera to AWS, redesigning pipelines using Spark on EMR and modern CI/CD deployment patterns.
- Developed secure data ingestion pipelines integrating on-prem APIs with Azure Synapse for enterprise analytics use cases.

Data Scientist (Research Engineer)
Fraunhofer IKS, Munich

May 2021 - March 2022

- Researched hybrid anomaly detection systems combining deep learning and rule-based reasoning for safety-critical environments.
- Applied contrastive learning (MoCo) to improve model robustness under sparse anomaly scenarios.
- Collaborated with domain experts to transition research prototypes into production-viable system designs.

Education

M.Sc. Data Analytics, Universität Hildesheim

2021, Grade 1.6

B.Sc. Electrical & Electronic Engineering, University of Ibadan

, First Class Honours

Core Competencies

AI & Machine Learning

Python, PyTorch, Hugging Face, LoRA / PEFT, RAG Architectures, Multimodal AI

AI Systems & Infrastructure

Kubernetes, Docker, Terraform, GitLab CI/CD, Model Serving Architectures

Cloud Platforms

AWS (Bedrock, SageMaker, Lambda, SQS, EMR), Azure (Synapse, OpenAI)

Observability & Operations

Prometheus, Grafana, ELK Stack, Production Monitoring & Drift Detection

Data Engineering

PySpark, SQL, Data Pipeline Architecture

Systems Languages

Rust, Go (Working Knowledge)

Community Engagement

Data Analytics Instructor, ReDI School of Digital Integration

2023–2025

AWS Community Builder, AWS Community Builder

2021–2025

NLP Tutor, DeepLearning.AI

2021

Professional Certifications

1. AWS Machine Learning Specialty
2. AWS Solutions Architect Associate
3. Terraform Associate
4. Azure Fundamentals
