PROFILE

Applied AI Engineer specializing in the design, deployment, and operation of data-centric, production AI systems. Combines strong foundations in machine learning with deep experience in cloud infrastructure, Kubernetes, and observability to deliver reliable, cost-aware AI solutions that operate at scale. Experienced across the full AI lifecycle—from problem formulation and dataset design to model adaptation and long-running inference systems.

EXPERIENCE

Machine Learning Engineer | YouGov (formerly GfK)

JULY 2024 - PRESENT

- Led development of a Receipt Intelligence Platform delivering a multimodal pipeline combining OCR, vision-language models, and LLMs to extract structured FMCG data across diverse international receipt formats.
- Designed data-centric evaluation workflows, including synthetic dataset generation and error-driven retraining loops to improve robustness against real-world noise and layout variability.
- Architected scalable serverless inference pipelines using AWS Bedrock, Lambda, SQS, MongoDB, and Terraform to enable automated processing with minimal operational overhead.
- Implemented ML observability frameworks leveraging ELK to monitor model behavior, latency, and failure patterns across production deployments.
- Contributed to internal MLOps strategy integrating SageMaker Pipelines and GitLab CI/CD for controlled model release and lifecycle management.

Machine Learning Consultant | Machine Learning Reply GmbH

APRIL 2022 - MAY 2024

- Delivered applied AI and data platform solutions for enterprise clients including Allianz, Volkswagen, and Porsche.
- Built containerized RAG-based knowledge systems on Azure using OpenAI embeddings and FastAPI, enabling privacy-preserving legal document analysis workflows.
- Designed and operated Kubernetes-based data and ML platforms using Argo Workflows, Prometheus, and Grafana, reducing incident detection time by ~50%.
- Migrated ~1 PB of legacy data infrastructure from Cloudera to AWS, redesigning pipelines using Spark on EMR and modern CI/CD deployment patterns.
- Developed secure data ingestion pipelines integrating on-prem APIs with Azure Synapse for enterprise analytics use cases.

Data Scientist (Research Engineer) | Fraunhofer IKS

MAY 2021 - MARCH 2022

- Researched hybrid anomaly detection systems combining deep learning and rule-based reasoning for safety-critical environments.
- Applied contrastive learning (MoCo) to improve model robustness under sparse anomaly scenarios.
- Collaborated with domain experts to transition research prototypes into production-viable system designs.

EDUCATION

M.Sc. Data Analytics | Universität Hildesheim

2021 | GRADE 1.6

B.Sc. Electrical & Electronic Engineering | University of Ibadan

| FIRST CLASS HONOURS

TECHNICAL STACK

AI & MACHINE LEARNING

Python, PyTorch, Hugging Face, LoRA / PEFT, RAG Architectures, Multimodal AI

AI SYSTEMS & INFRASTRUCTURE

Kubernetes, Docker, Terraform, GitLab CI/CD, Model Serving Architectures

CLOUD PLATFORMS

AWS (Bedrock, SageMaker, Lambda, SQS, EMR), Azure (Synapse, OpenAI)

OBSERVABILITY & OPERATIONS

Prometheus, Grafana, ELK Stack, Production Monitoring & Drift Detection

DATA ENGINEERING

PySpark, SQL, Data Pipeline Architecture

SYSTEMS LANGUAGES

Rust, Go (Working Knowledge)

COMMUNITY

Data Analytics Instructor | ReDI School of Digital Integration

2023–2025

AWS Community Builder | AWS Community Builder

2021–2025

NLP Tutor | DeepLearning.AI

2021

CERTIFICATIONS

1. AWS Machine Learning Specialty
2. AWS Solutions Architect Associate
3. Terraform Associate
4. Azure Fundamentals
